## **To Architects and others.**

We beg to draw the attention of the profession and others interested in the Building Trade to the great advantages Terra Cotta possesses over Stone.

An observant eye cannot fail to notice the decay that is taking place in all stonework, particularly that of a moulded or enriched character, in Buildings erected even within the last few years in any of our large towns, whilst our Terra Cotta has an almost everlasting durability, atmosphere and other external influences having but little effect upon its surface, whilst for strength and hardness it is superior to the best Roman or Portland Cement.

In the case of enriched work requiring quantities of similar blocks, Terra Cotta will be found to be much cheaper and more speedily produced than Stone, and whilst the latter becomes dirtier with rain, Terra Cotta after a heavy down-pour shows up perfectly fresh.
